*Welcome*

**TO OUR 7TH ANNUAL BULL SALE!**

For the first time ever, we are opening the herd genetics and offering a very nice set of purebred heifers. It was a hard decision but it's time to share the program that we have built. Nothing was sorted off and held back. The entire 2024 heifer calf crop will sell.

In addition to the Charolais heifers, we are offering the entire set of SimAngus heifers that we raised with the intention of making replacements for our commercial herd. They carry Wagon Hammer Ranch genetics. Don't miss out on a fancy set of heifers that are open and ready to breed.

**SINCERELY,**

*Chris and Malinda Matthews*

"Take any red hided cow and a Charolais bull and you have the ultimate auction eye candy and a "get on the edge of your seat experience".

Put a Charolais bull on your black cows and those smokey calves will top any market. Absolutely no other breed will upgrade a set of plain, poor confirmation cows like introducing them to Charolais genetics. For over 40 years, I have watched these scenarios play out time and time again at our auction.

Charolais' muscle, bone, depth and color are undeniable! Tonnage for the cow man, performance for the feed yard, and figures for the packer. Charolais have arrived and you've come to the right place... Horse Creek Charolais.

*John Campbell*

### GENOMIC-ENHANCED EPD'S (GE-EPD):

### REGISTRATION PAPERS:

All purebred bulls are registered with the American International Charolais Association. Registration papers are available **by request only**.

#### AVERAGE NON-PARENT EPD AS OF JANUARY 2024:

CE	BW	WW	YW	MILK	TSI
11.2	-1.2	61.7	111.2	24.1	254.61

#### HORSE CREEK BULLS AVERAGE EPD:

CE	BW	WW	YW	MILK	TSI
15.7	-2.9	63.2	111.1	22.8	258.83

### USING EPDS FOR SELECTION

Expected Progeny Differences (EPD) is a prediction of how future calves of a bull are expected to perform compared to other bulls in the breed. The EPD itself does not imply "good" or "bad" performance, but rather the EPD gives a prediction of the average difference to expect in the performance of a bull's calves compared to other bulls in the same breed. The EPD is reported as a plus or minus value in the unit which the trait is measured.

**CALVING EASE DIRECT (CE)** is based on calving ease scores and birth weights. More positive EPDs are favorable and indicate easier calving. The EPD for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at 2 years of age.

**BIRTH WEIGHT EPD (BW)** The expected difference in avg. birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

**WEANING WEIGHT EPD (WW)** The expected difference in average weaning weight of calves expressed in pounds. This EPD reflects the genetic influence on pre-weaning growth rate.

**YEARLING WEIGHT EPD (YW)** The expected difference in average yearling weight of calves expressed in pounds. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate. It is the best estimate of total growth.

**MATERNAL MILK EPD (MILK)** The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

**TERMINAL SIRE INDEX (TSI)** is a formal method of combining epds for bwt, wwt, ywt, and all carcass epds into one single value. The tsi represents a dollar index per terminal progeny produced for a bull in the aica database, ranking them for profit potential. This dollar index is to be interpreted much like single trait epd. For example, if sire a's index is \$191.66 And sire b's index is \$200.00, Then we would expect sire b's offspring to average \$8.34 More net return (\$200.00 Minus \$191.66) Than sire a's offspring.
